CST8218 Lab5: ReactJS Page

Submit your final results to Brightspace and demonstrate to your lab professor for 1+2=3 marks (3% of course grade)

See Brightspace for due date.

Objective: Implement a ReactJS page that accesses your Lab 3 Restful API to display the first and last names of the contacts in your contacts application database.

Instructions:

- Implement the ReactJS page as discussed in class – see the React Powerpoint deck
- The code as given needs to be changed in some places (for example, you need to use the IP address of the computer running your Glassfish server).
- Submit your page to Brightspace

Demonstration

- Show that you have some contacts in your database, and show that your react page displays the first and last names of those contacts.
